

RELEASE NOTES

Updated Firmware & PPS for G-Series P25 Voice Pagers (G2, G3, G4, G5)

Firmware Version: V1.33

PPS Version: V0.3.16.29E

Release Date: 09/2022

Device software (V1.33) and programming software (V0.3.16.29E) include bug fixes to correct issues and optimize performance. An overview of the changes included in this release are outlined below.

Bug/Issue Fixes:

- Fixed several issues that were reported on P25 2 tone paging
- Fixed multiple issues regarding 2 tone analog paging
- Fixed issue that occurs when the system is keyed up immediately after tones are sent (removing the hang time) causing the pager to not open for the voice message
- Fixed issue that occurs when instant transmit is in use on the system
- Optimized multi-select on P25 Trunking
- Fixed issue that causes the unit to fail to decode CTCSS during multi-channel scan
- Fixed issue that caused garbled voice (Harris P25 phase II system)
- Fixed issue that occurs when paging agency that has the same TGID but different subgroup tones (Speaker opens)
- Fixed issue with DES-OFB encryption decoding on P25 conventional causing the unit to miss the first few words of the transmission
- Multiple under the hood fixes and optimizations for smoother operation

PPS Changes/ Feature Modifications:

- Improved boot time
- Removed amplified charger audio delay when voice buffering is disabled in the PPS
- Added support for DES decryption on P25 trunking phase II
